Float Properties

Float property is applied on element around which you want to wrap the text

- 1. Left Elements stays on left and the text wraps around from right
- 2. Right Element moves on right and the text wraps around from left
- 3. None No wrapping on text

Clear Property

If you want to wrap text in an element but don't want to wrap all the text. You can give a property of clear to not apply the wrapping to that element.

Clear Example

```
img {
                                         float: left;
text... 
<footer>Copyright App Brewery</footer>
                                     footer {
                Lorem ipsum
                dolor sit amet.
                                        clear: left;
                Copyright App Brewei
```
